## Regency CMaaS

### Credential management as a service

Identity authentication and management is a recognised cornerstone of cybersecurity for most organisations. However, creating appropriate, adaptable and cost effective solutions and subsequently managing them in-house can be a significant undertaking.

Regency now offer a proven hosted solution to the challenge of credential management as a service (CMaaS). The service is delivered through our partnership with Intercede and their MyID product.

If you are concerned about the burden, inadequate performance and cost of an existing credential management system that has been outgrown by expansion, acquisition and regulation, then adopting the CMaaS service allows you to:

- Remove risk through monitored policy automation
- Remove cost through efficiencies of hosting
- Remove complexity by policy management and process standardisation

### Assurance through excellence

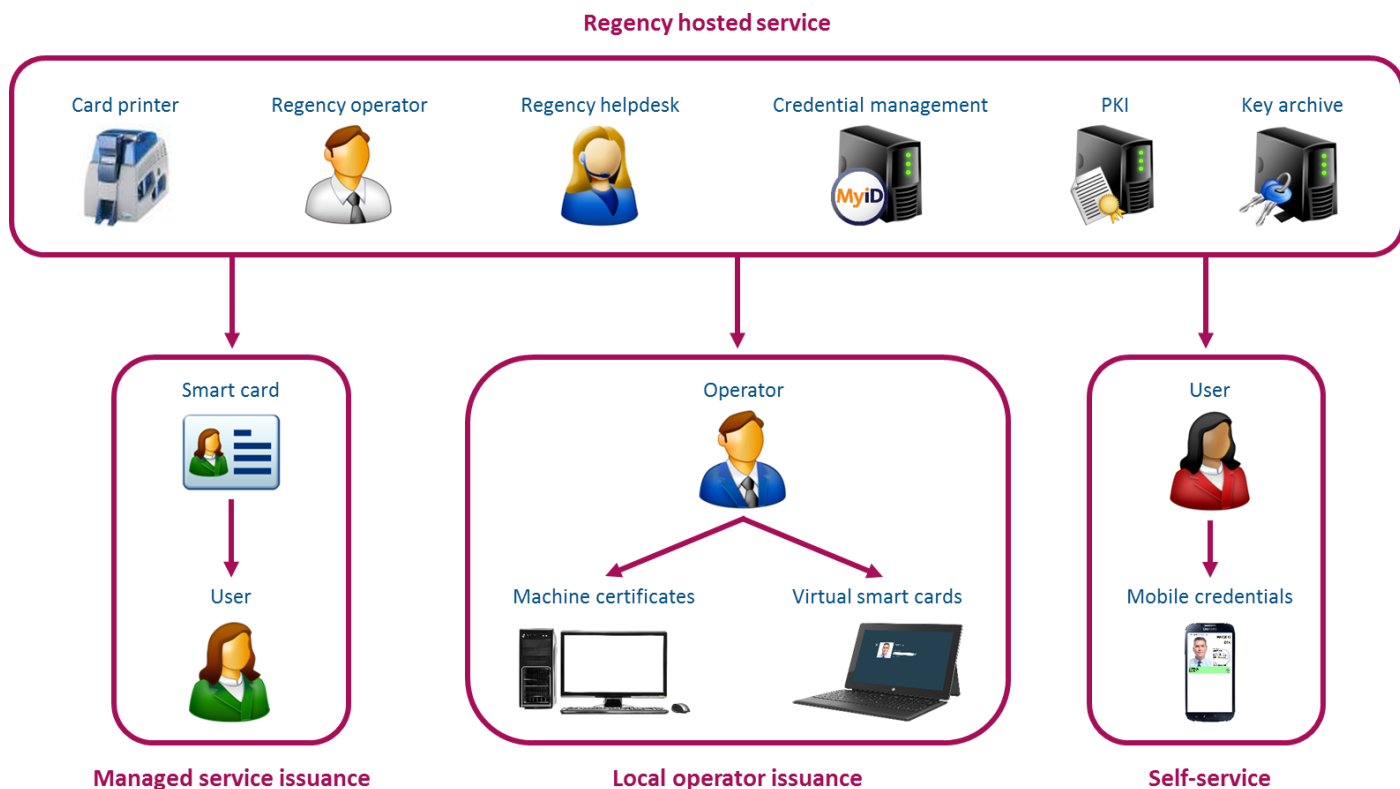

Regency IT Consulting has gained an enviable reputation within both the public and commercial sectors for the provision of managed services, information assurance and business change. Regency's partner Intercede has provided identity and credential management services to global customers for more than 20 years and their MyID system already manages millions of identities worldwide. Regency selected the market-leading MyID suite to provide a proven yet flexible foundation for their CMaaS offering, which is delivered by a dedicated team of network security analysts and specialists providing 24/7/365 incident response.

### Key features

- 1 **Registration:** Collect user data by manual or automated means.
- 2 **Request:** Apply for a credential; this can be done manually by an operator or automatically from an on-premise IDMS. The service provides policy driven control over who can request what and for whom, and logically provisions access.
- 3 **Issuance:** Credentials can be produced as part of the managed service and delivered to the end user as a smart card or for self-collection, or sent over-the-air to their mobile device via the MyID Identity Agent.
- 4 **Services:** The hosted solution provides support for multiple credential (certificate) types including signing, authentication and encryption. To ensure certificate validity a CRL service is provided for revocation checking.
- 5 **Lifecycle management:** Credentials, whether on smart cards, mobile devices or machines, need to be managed. Our CMaaS offering provides lifecycle management capabilities to ensure that a high level of service is maintained, including smart card unlock capabilities, lost/stolen/leavers revocation services and credential updates (e.g. issuing replacement or additional certificates due to policy changes or a device refresh).

## Regency CMaaS schematic

The CMaaS service comprises of a public key infrastructure (PKI) solution, a credential management system (MyID) and dedicated Regency ITC administrators, helpdesk and operators.

## Quality solutions

Regency operates from a secure operating centre (SOC) facility in Cheltenham. If required, resilient support for the service can be provided using a second secure facility operated by our parent company, Airbus Defence & Space, in Newport. Both sites are approved by the UK Government to handle material up to and including UK SECRET. The CMaaS solution is delivered and monitored by Regency ITC's highly respected professionally certified security consultants (CESG CLAS, CISSP). In addition to CLAS, all of our security team have certification from the industry-endorsed CESG Certified Professional (CCP) scheme.

MyID was the first electronic personalisation product to achieve compliance with the US FIPS-201 PIV standard and is widely deployed by US, European and UK organisations in both the public and private sectors.

## About us

We are a dynamic, fast growing company with a proven track record and a clear vision to deliver service excellence across all of our consulting roles. By putting the client first, we ensure that we meet all of the changes and challenges that their business might encounter now and in the future.

Founded in 2005, Regency ITC offers security consultancy and managed services to public and private sector clients from secure premises in Cheltenham. In 2010 Regency was bought by Cassidian (Airbus Defence & Space), expanding our cybersecurity offering and ensuring we remain positioned to address the continually evolving asymmetric threat posed by the cyber domain.
